DIEHARD™ TURF

Part 1: General Description

DIEHARD™ Turf is formulated to be used as a soil amendment treatment for establishing turf root systems with live beneficial mycorrhizal fungi. A mycorrhizal root system is one that will uptake more water and nutrients than a non-mycorrhizal system. DIEHARD™ Turf contains highly selected strains of low host specificity endomycorrhizae fungi that will quickly colonize the roots to provide the best possible conditions for the roots to become associated with mycorrhiza. The mycorrhizal inoculants are combined with humic acids, beneficial bacteria, soluble sea kelp, and yucca plant extracts, to promote rapid root development.
